home can
do more.**

Retrofit wireless technology to
transform your house into a smart home

:hager

**Now your home
is getting
smarter.**

Using the coviva smartbox.

Temperature control

The smart heating control system makes sure that every room in your home is the perfect temperature for the time of day and your preferences.

Lighting

Want bright or dimmed lighting? coviva ensures the perfect lighting mood for the time of day and your requirements in every area of your home.

Shades and blinds

With coviva, you can adjust your shades and blinds to suit your needs.

Safety

Keep fires from taking hold with coviva. Your wireless smoke detector will notify you if things heat up at home.

Expansion

coviva can already be extended to include the Netatmo weather station. Its modular design makes coviva easily extendable to include more functions in the future.

Wireless smart home technology for easy retrofitting.

Simply wireless

There are many smart home solutions, but coviva is different. It requires no expensive building work and can be installed without costly routing work for electricity and data cables. This makes coviva the perfect solution for refurbishing and renovations.

What does this get you?

Plenty! You can easily control the lighting, blinds and heating using the app. This saves time, energy and money. With coviva, you create your own personalised scenarios – known as covigrams – just like you've always wanted.

The coviva smartbox can be easily controlled by app – even when you're on the go.

Still have questions?

To help you with your decision we have summarised some of the most frequently asked questions about coviva.

What are the minimum requirements for coviva?

To use coviva in your home, you need a compatible smartphone or tablet (Apple version 8 or later, Android version 4 or later), a stable Internet connection and a free LAN port on your Internet router.

Can I use coviva offline?

You can use the system on a private WLAN without an Internet connection. Your electrician only needs an Internet connection when installing your coviva smartbox to register the device.

How does coviva protect your data?

Your personal data is stored on the coviva smartbox. Your data is encrypted when you send commands outside of your WLAN area via smartphone or access support services. Your permission is required in both cases.

What is coviva's wireless range?

The wireless range is similar to that of your WLAN router: around 30 metres indoors or 100 metres outdoors. This may vary depending on local conditions.
